

CLIMA-GUARD II

Saves in these five important ways

- 1 Energy:**
Save up to 50% on your monthly utility bills and be more comfortable. **CLIMA-GUARD II** keeps you cooler in the summer - warmer in the winter.
- 2 Maintenance:**
No more patching, painting or roof coating. **CLIMA-GUARD II** maintenance free systems save both money and time... large amounts of each.
- 3 Noise:**
CLIMA-GUARD II sound conditions your home from rain, wind, hail, and other weather conditions. The result - a peaceful and quiet home!
- 4 Leaks:**
The overlapping roof panel design, coupled with a generous overhang on all sides directs water away from your home. **CLIMA-GUARD II** eliminates damaging leaks and unsightly streaks.
- 5 Value:**
A new Dacraft roofing system will raise the value of your mobile home with its non-prorated, transferable warranty!

CLIMA-GUARD II

Dacraft - One of the oldest and largest mobile home insulated roofing manufacturers in the United States. Thousands of satisfied customers. Transferable warranties. *Your peace of mind assures our continued success!*

- Built with the highest quality materials available
- Installed by experienced, dedicated craftsmen

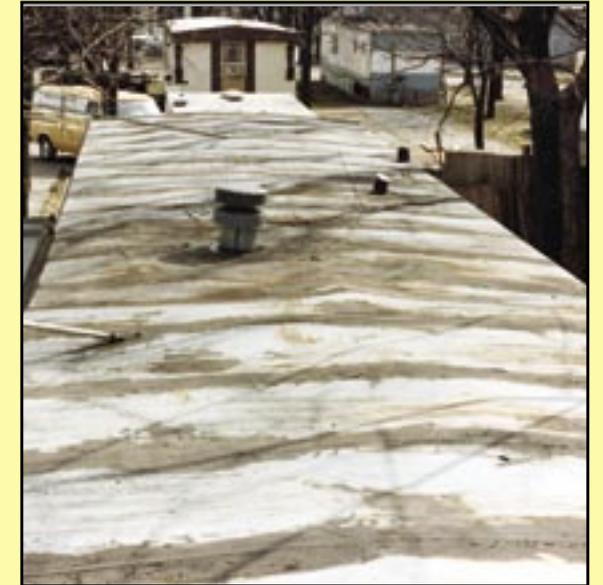

2" Thick insulation-

How this system works: An aluminum support angle is mounted to the roof line, attached by self-tapping screws, onto the side of the home. At no time are any holes or screws put into the original roof. The entire roof is covered with sheets of 2" thick insulation. The insulation fits under the edge of the support angle. Aluminum baked-enamel roof panels are then overlapped tightly on top of the insulation for the entire length of the home. Because the roof panels are extended beyond the home, rain is carried away from the outside walls, preventing water streaking. To complete Dacraft's CLIMA-GUARD II roof a decorator trim is attached along the sides of the home to the edge of the roof panels. Available in six different decorator colors - over 20 color combinations!

Keeps service calls to an absolute minimum

Beautifies system by eliminating unsightly face screws

Before

This roof is showing age. Extensive (and expensive) patching and painting is needed to (hopefully) stop leaks and prevent rainwater stains and streaking.

After

Eliminates all maintenance and immediately begins to save money on energy costs. The high quality design and construction banishes leaks and ends streaking. The appearance and value of your home is enhanced.
